Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

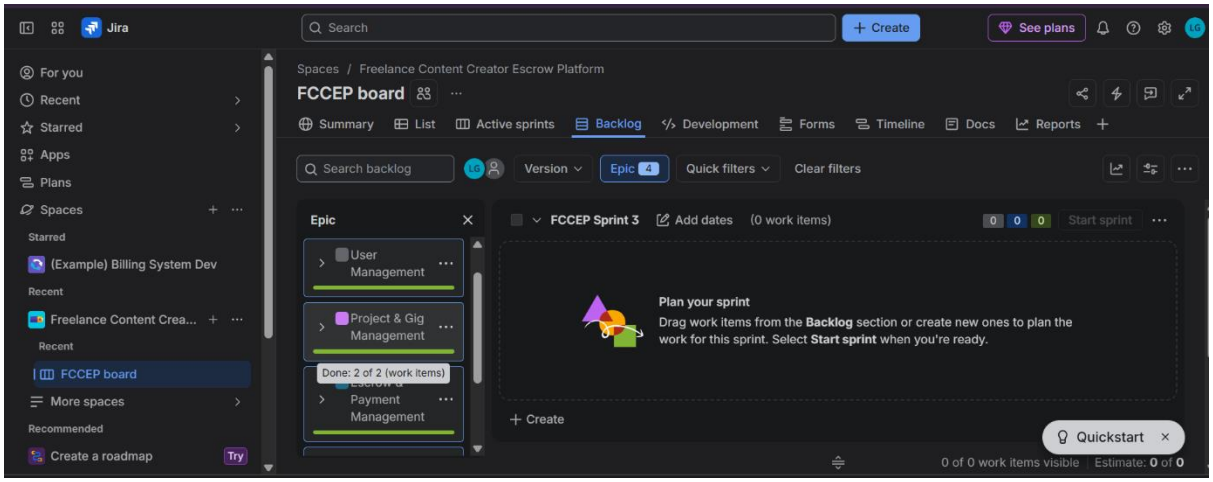

NAME : L A GOKUL	SRN : PES2UG24CS246
SECTION : D	DATE : 25-08-2026

PROBLEM STATEMENT #53 - Freelance Content Creator Escrow Platform

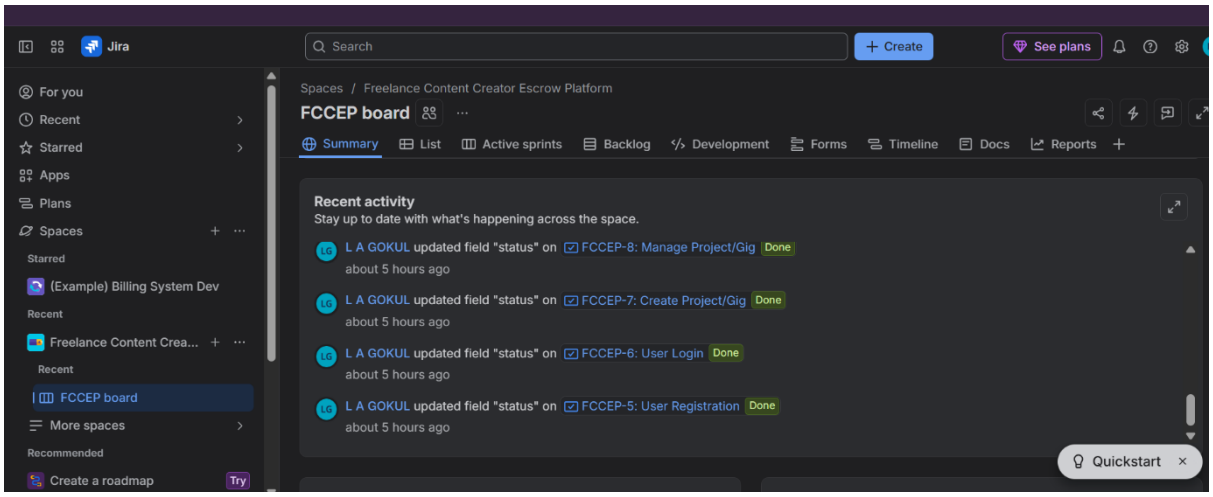

Domain : Media, Events & Community

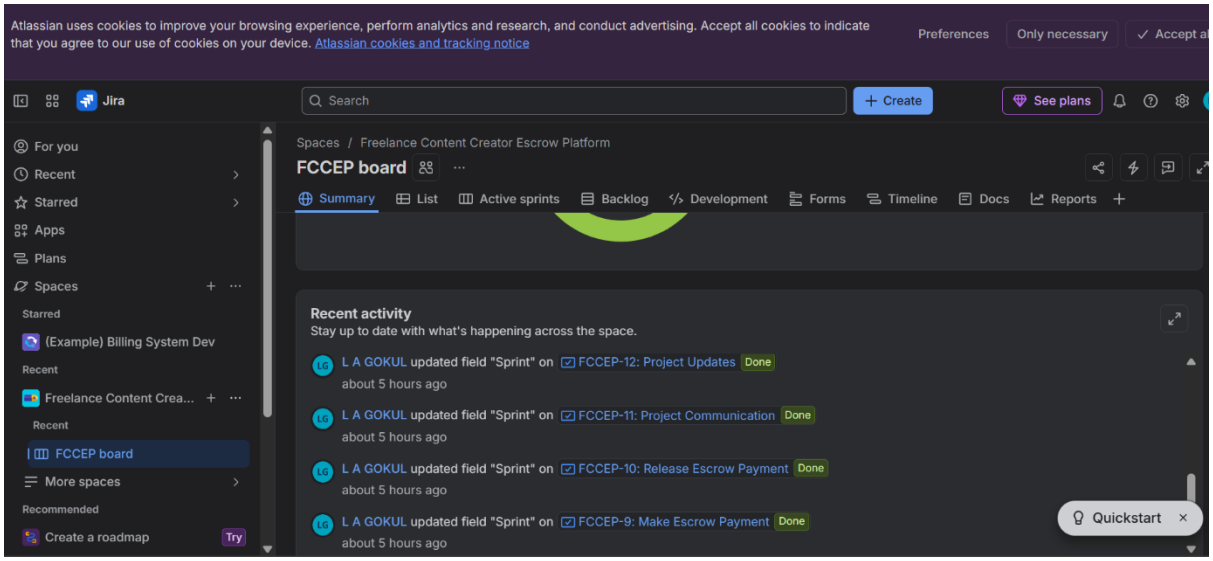

Deliverable 1: Jira Backlog with Epics and User Stories :

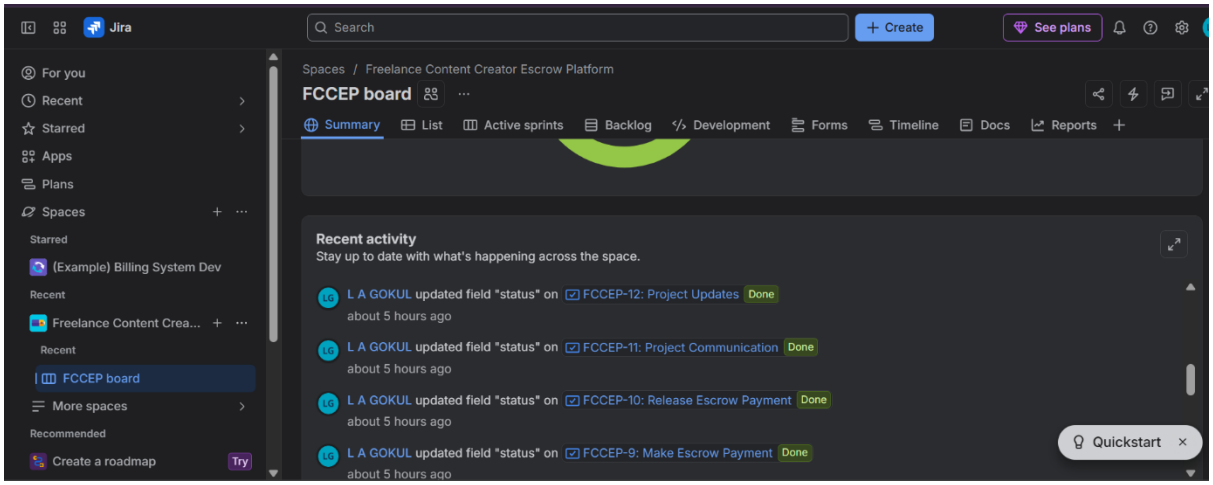

Deliverable 2: Story Point Assignments

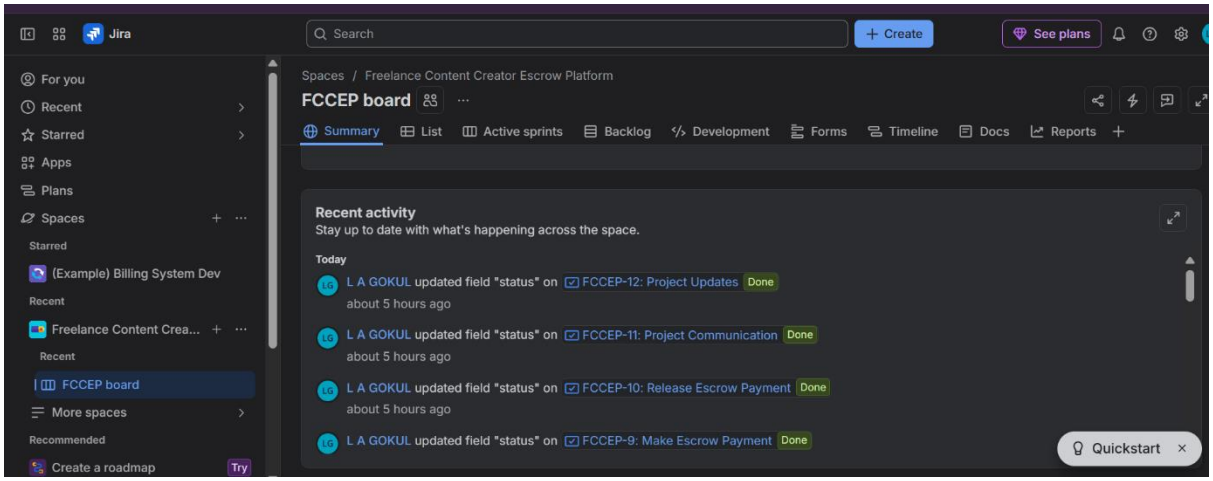

Deliverable 3 – Sprint Board (Active Sprint View)

Active Sprint 1 View :

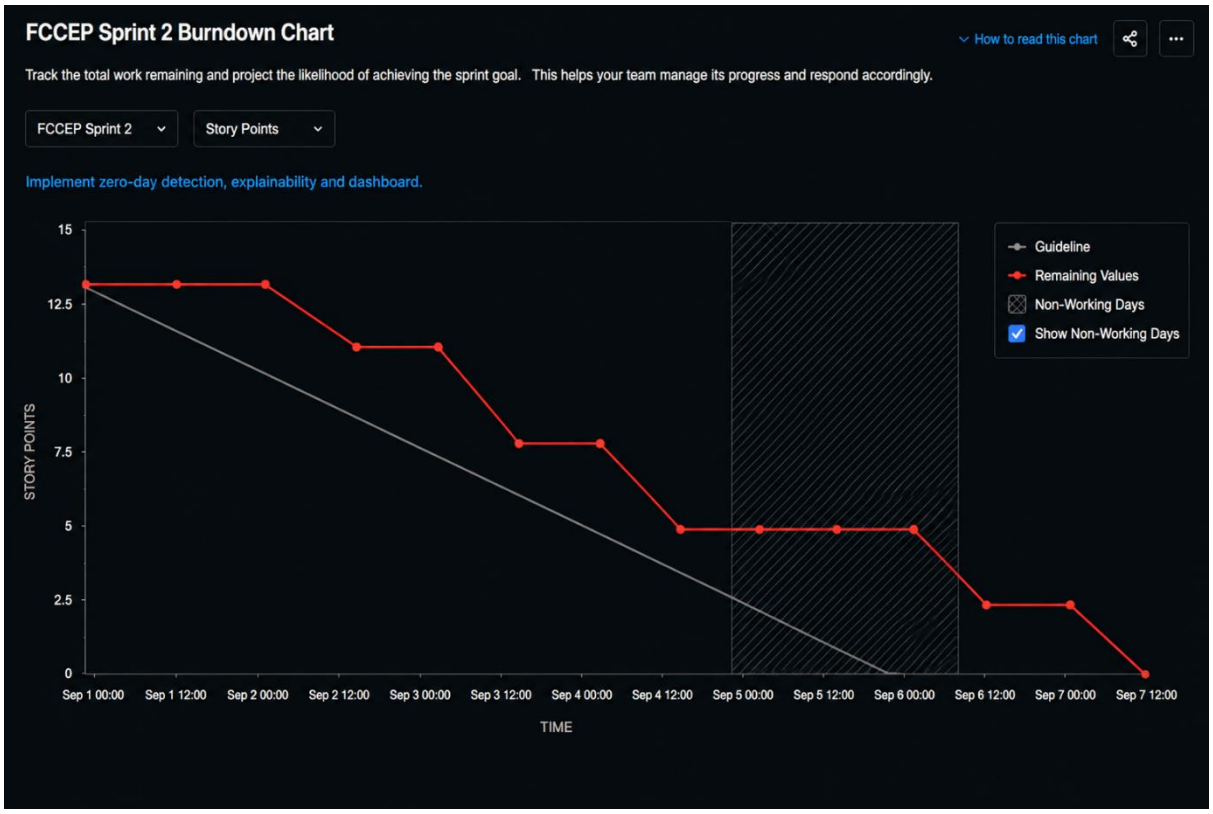

Deliverable 4 – Sprint Burndown Chart

Sprint 1 Burndown Chart :

Sprint 2 Burndown Chart :

Reflection Questions – Answers :

1. Did your estimations reflect the actual effort?

Answer:
Yes, our estimations reasonably reflected the actual effort. We used Fibonacci story points to estimate the complexity and effort of each user story. The stories assigned lower points were relatively simpler, while the higher-point stories required more effort and complexity.

2. Was your backlog well-prioritized?

Answer:
Yes, our backlog was well-prioritized based on business value and user needs. Important features related to user management, project and gig management, escrow and payment management, and communication were given higher priority.

3. How did your simulated sprint align with your plan?

Answer:
Our simulated sprint aligned well with the plan. We selected the planned user stories and moved

them through **To Do → In Progress → Done**. The selected stories were completed successfully within the simulated sprint.

4. What insights did the burndown chart give about your team's capacity?

Answer:
The burndown chart showed that the remaining work gradually decreased from approximately **17.5 story points to 0** as the user stories were completed. This indicates that the team was able to complete the planned workload and provides a useful indication of the team's capacity for future sprint planning.
